Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Objections

1. Claims 8-10 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from another multiple dependent claim. Claims 9 and 10 depend from claim 8, which depends from one of claims 1-7, of which claims 5 and 6 are multiple dependent claims. See MPEP § 608.01(n). Accordingly, the claims 8-10 not been further treated on the merits.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4, and 11-12 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by DE 9012439, figure 3, cited by applicant; or Kraznai et al, 5,065,473, figure 3 and column 3, lines 15-37.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of

Art Unit: 3723

the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over DE 9012439, figure 3, cited by applicant; or Kraznai et al, 5,065,473, figure 3 and column 3, lines 15-37, in view of Lenkiewicz et al, 2005/0050672. '439 or '473 do not disclose two filling marks located at a right angle to each other are provided in the viewing window to indicate the level of dust when the container is horizontal or vertical; the viewing window is right-angled and the filling marks are formed by two lines extending in parallel to one window edge each, one line of which extending close to the long window edge at the top when the dust-collection container is oriented vertically, and the other line extending close to the front, short window edge pointing close to the dust-intake opening. In a collection device, '672 teaches providing two fill marks located at a right angle to each other in the viewing window, the viewing window is right-angled and the filling marks are formed by two lines extending in parallel to one window edge each, one line of which extending close to the long window edge at the top when the collection container is oriented vertically, and the other line extending close to the front, short window edge pointing close to an intake opening. It would have been obvious to one of ordinary skill to have provided '439 or '473 with the right angled fill marks as taught by '672, figures 3

and 3a, to allow the user to determine the amount in the container when the container is horizontal or vertical, see [0041].

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Other similar devices are cited of interest.
